

## ABSTRACT OF THE DISCLOSURE

A system and method for displaying an image configured to be printed on a print medium in its selected size. According to one aspect, a terminal displays a plurality of images from which a user may select to view at least one of the images to be printed. The terminal is operable to enable the user to select specific characteristics of the image as well as the mounting background upon which the image is to be positioned. A display device is attached to the terminal to display the selected image along with their selected characteristics according to their selected attributes (e.g., sizes and colors). A printed version of the selected image may be printed according to the selected attributes of the selected image substantially immediately following the selection of the image and its attributes.
